1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary report on patentability and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.
4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary report on patentability. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the *PCT Applicant's Guide*.

The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed invention is patentable or not" (see Also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.

## 2. Citations and explanations (Rule 70.7)

The claimed invention

The claimed invention relates to a method and a system for routing a message or a set of messages or a session from a first equipment connected or registered to a first network, to a second equipment connected or registered to a second network.

The claims have been amended.

The following document were cited in the International Search Report:

D1: WO 9911087 A2  
D2: WO 0243405 A1  
D3: WO 0079825 A1

D1 relates to a method and a system for processing calls for communication equipment with a subscriber number ported from a first operator to a second operator. D1 describes on page 2 lines 4-23 that each communication network forms a database of ported (routed) numbers. The database is accessible from at least one gateway exchange and the subscriber numbers ported from one operator to another are stored together with information about the network to which the subscriber numbers belong. Upon an incoming call (setup request), the called subscriber number is compared with the subscriber numbers in the database; and on the basis of the result of that comparison, routing information for the further processing of the call is composed.

However, D1 does not describe a message requirements check for deciding on the routing, nor does D1 describe a release of a session based on the check result.
